### Italy, Palermo

### REGISTRATION AREA

The Palarmo Province Cancer Registry (PPCR) covers the province of Palarmo in the north-weetern part of the autonomous region of Sicily in Italy. The province has a population of 1.2 million and an area of 4992 km² (resulting in a population density of 248.1 residents/ km²). Trade and service activities are mainly certified out in the metropolitan area of the city of Palarmo, which is the provincial capital. Farming and fishing are prevalent throughout the rest of the province Shipbuilding is an important industry. The population is stable and young: 17% of residents are age more than 65 years. Most of the population is Caucasian, and Catholicism is the prevalent religion.

### CANCER CARE FACILITIES

Health care services are provided by 14 district hospitals, 11 other hospitals, and 12 private clinics, located predominantly in the city of Palerma and including three oncology departments, three radiotherapy departments, and one haematology service with a transplant unit.

### REGISTRY STRUCTURE AND METHODS

The registry was established in 2003 by the Sicillan government. Its staff consists of a director, an epidemiologist, seven registrars, three statisticians, and three clerks. The registry is part of the regional health information system and is subject to the relevant privacy legislation. The main sources of information are discharge diagnoses, pathology records, and death certificates. Additional information is obtained from medical records and general practitioners. Data collection is both active and pessive.

### INTERPRETING THE RESULTS

Because cancer care tacilities are available locally, few residents travel to receive treatment elsewhere. The quality of the registry data is periodically verified using IARC tools and software developed by the Italian network of cancer registries (AIRTUM), incidence rates are similar to those in other areas of southern Italy, with relatively high rates of liver and thyroid cancers.

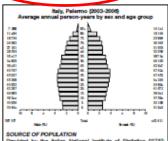

A breast cancer screening programme was started in

### USE OF THE DATA

Registry data are used to survey cancer incidence throughout the registration area, to inform local cancer control strategies, and for the evaluation of health

## Nasce il registro tumori della provincia di Palermo

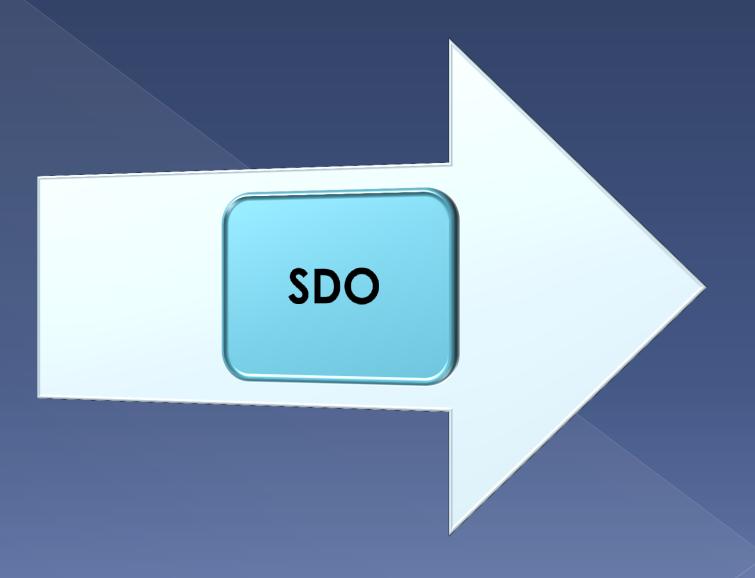

Sarà presentato questa mattina alle 9, nella sala dei Baroni di Palazzo Steri, il registro tumori della provincia di Palermo, istituito presso la sezione di Igiene del Dipartimento di Igiene e Microbiologia dell' Università di Palermo I lavori della sessione scientifica saranno introdotti dal professore Nino Romano, direttore del Registro. In Sicilia, ogni anno, muoiono circa 11 mila persone a causa della sola malattia neoplastica e di queste circa seimila sono maschi e circa cinquemila femmine. Finora gli unici dati disponibili relativi all' incidenza dei tumori sono stati quelli forniti dal registro di Ragusa

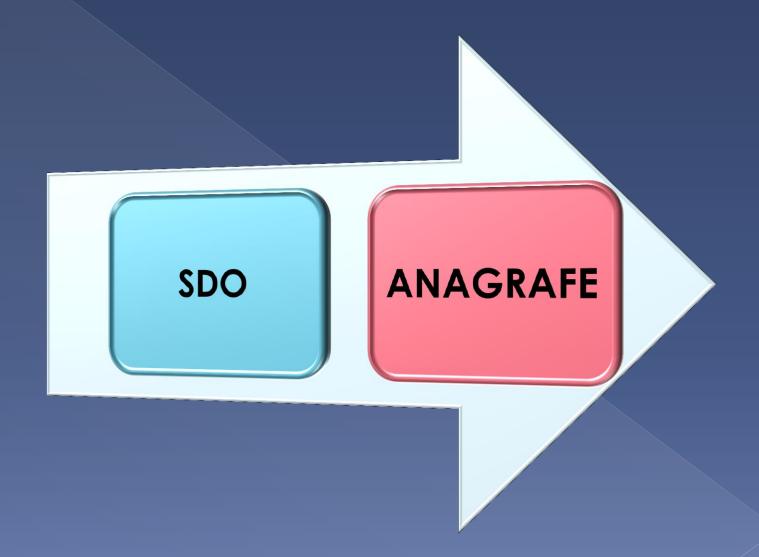

# Uno strumento fondamentale che costituisce, in Sanità Pubblica, la base di conoscenza per "Le nuove frontiere della prevenzione in Oncologia"

- Public health surveillance is the ongoing, systematic collection, analysis, interpretation, and dissemination of data regarding a health-related event for use in public health action to reduce morbidity and mortality and to improve health.
- Data disseminated by a public health surveillance system can be used for immediate public health action, program planning and evaluation, and formulating research hypotheses.

### Global surveillance of cancer survival 1995–2009: analysis of individual data for 25 676 887 patients from 279 population-based registries in 67 countries (CONCORD-2)

Claudia Allemani, Hannah K Weir, Helena Carreira, Rhea Harewood, Devon Spika, Xiao-Si Wang, Finian Bannon, Jane V Ahn, Christopher J Johnson, Audrey Bonaventure, Rafael Marcos-Gragera, Charles Stiller, Gulnar Azevedo e Silva, Wan-Qing Chen, Olufemi J Ogunbiyi, Bernard Rachet, Matthew J Soeberg, Hui You, Tomohiro Matsuda, Magdalena Bielska-Lasota, Hans Storm, Thomas C Tucker, Michel P Coleman, and the CONCORD Working Group\*

### Summary

Background Worldwide data for cancer survival are scarce. We aimed to initiate worldwide surveillance of cancer survival by central analysis of population-based registry data, as a metric of the effectiveness of health systems, and to inform global policy on cancer control.

Methods Individual tumour records were submitted by 279 population-based cancer registries in 67 countries for 25·7 million adults (age 15–99 years) and 75 000 children (age 0–14 years) diagnosed with cancer during 1995–2009 and followed up to Dec 31, 2009, or later. We looked at cancers of the stomach, colon, rectum, liver, lung, breast (women), cervix, ovary, and prostate in adults, and adult and childhood leukaemia. Standardised quality control

Endemic hepatitis C virus infection in a Sicilian town: further evidence for iatrogenic transmission.

Di Stefano R<sup>1</sup>, Stroffolini T, Ferraro D, Usticano A, Valenza LM, Montalbano L, Pomara G, Craxì A.

Among 721 subjects studied, 75 (10.4%) were anti-HCV positive. The HCV infection rate increased from 0.4% in subjects 10-29 years of age to 34% in those > 60 years of age.

These findings indicate that HCV infection is common in the elderly, perhaps as a result of past iatrogenic transmission.

### 6 anni dopo...

J Med Virol. 2008 Oct;80(10):1723-31. doi: 10.1002/jmv.21276.

Phylogenetic reconstruction of HCV genotype 1b dissemination in a small city centre: the Camporeale model.

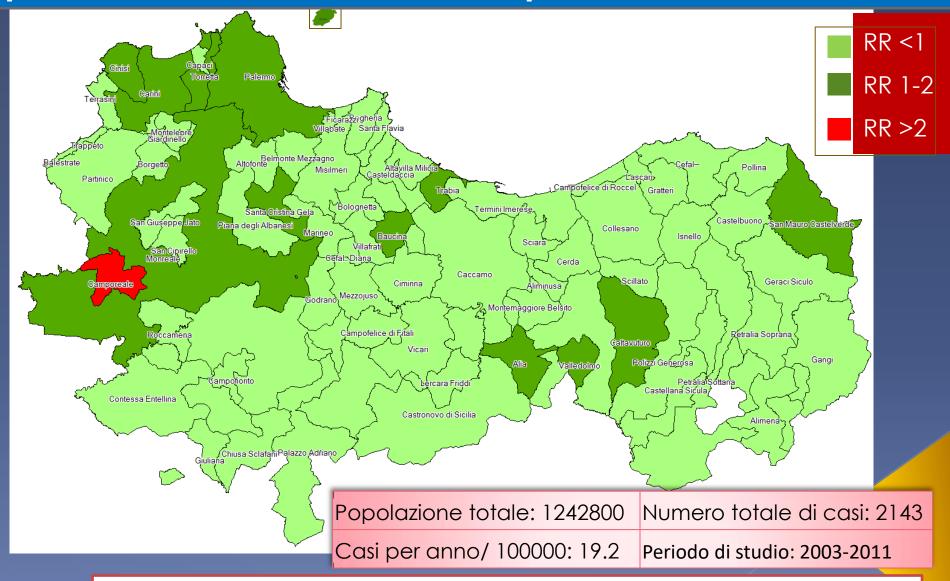

Ferraro D<sup>1</sup>, Genovese D, Argentini C, Giordano V, Pizzillo P, Stroffolini T, Craxì A, Rapicetta M, Di Stefano R.

Thirty-eight HCVgenotype 1b isolates from CP were associated in a monophyletic "transmission cluster."

it was calculated that HCV was introduced between the end of the 1940s and the beginning of the 1950s. The phylogenetic distance between the CP cluster and other Sicilian isolates confirmed its uniqueness and the local diffusion from a common ancestor.

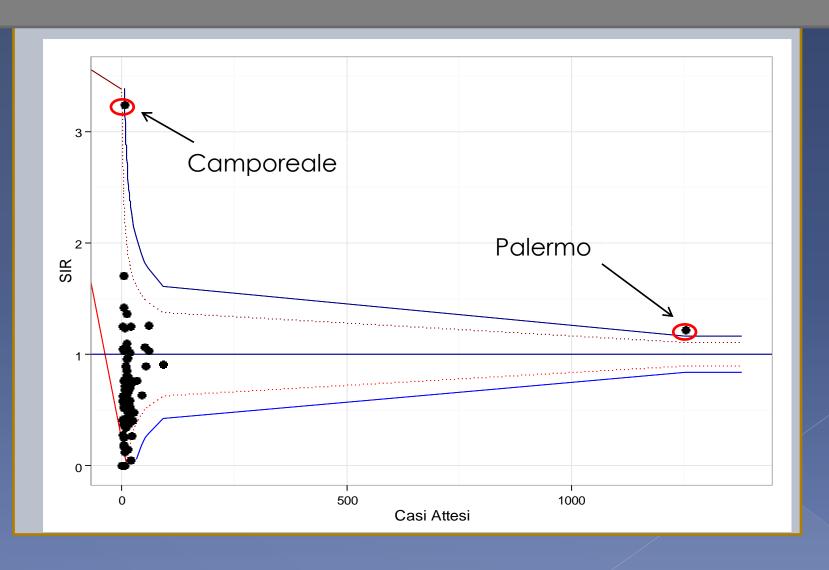

in CP, few HCV native strains have been transmitted in a limited length of time probably through iatrogenic routes, and then have not spread further.

### EPICOST\* - PROGETTO CCM 2014

L'impatto economico dei tumori sui sistemi sanitari regionali: stime e proiezioni in relazione a diversi scenari di intervento

8 registri italiani: Napoli, Latina, Palermo, Milano, Veneto, FVE, Umbria

Tumori colon-retto e mammella

## Analisi della variabilità dei costi per fase di malattia nelle aree dei Registri partecipanti:

- Variabilità di prestazioni erogate (n ricoveri e loro durata; n esami specialistici effettuati; prestazioni farmaceutiche in osp e territorio)
- Variabilità della valorizzazione delle prestazioni nelle singole realtà regionali (drg 149 in Umbria 9500 euro mentre in Sicilia 5138 euro) e de prezzo dei farmaci

### COMMENTI

Le esperienze internazionali, nazionali e locali mostrano come i Registri Tumori di popolazione siano in grado di contribuire attraverso la conoscenza epidemiologica del fenomeno neoplastico alla sorveglianza della malattia neoplastica e siano uno strumento imprescindibile per realizzare:

"Le nuove frontiere della prevenzione in oncologia"

### COMMENTI

La registrazione dei tumori, nell'immaginario di alcuni, può essere un lavoro noioso, poco interessante, di bassa professionalità,

ma solo se a svolgerlo sono persone noiose, poco interessanti, di bassa professionalità

## Sappiamo per certo che non lo sono...
